Series 250 · Type 3253-1 and Type 3253-7 Pneumatic Control Valves

Type 3253 Three-way Valve · ANSI version

Application

Mixing or diverting valve for process engineering applications with high industrial requirements

Valve size	NPS ½ to 20
Pressure rating	Class 150 to 2500
Temperatures	-325 to +1022 °F (-196 to +550 °C)

Type 3253 Three-way Valve with

- Type 3271 Pneumatic Actuator (Type 3253-1 Control Valve)
- Type 3277 Pneumatic Actuator (Type 3253-7 Control Valve) for integral positioner attachment

Valve body made of

- Cast steel
- Cast stainless steel, high-temperature cast steel or cast cold-resisting steel
- Special materials

Two spring-loaded PTFE V-ring packings or two adjustable high-temperature packings

On request with a test connection between the two packings.

Conversion between mixing and diverting services by **reversing** the seat-guided valve plug

Optional with RFID tags with unique device marking according to DIN SPEC 91406.

The control valves, designed according to the modular assembly principle, can be equipped with various accessories:

Positioners, limit switches, solenoid valves and other accessories according to IEC 60534-6 ¹⁾ and NAMUR recommendation. Refer to Information Sheet ▶ T 8350 for more details.

Versions

Standard version with PTFE packing for temperatures from 14 to 428 °F (-10 to +220 °C) or with adjustable high-temperature packing from 14 to 662 °F (-10 to +350 °C), valve size NPS ½ to 20, pressure rating Class 150 to 900

- **Type 3253-1** (Fig. 1) · Type 3253 Valve and Type 3271 Actuator with 350 to 2800 cm² actuator area (see Data Sheets ▶ T 8310-1, ▶ T 8310-2 and ▶ T 8310-3)
- **Type 3253-7** · Type 3253 Valve and Type 3277 Pneumatic Actuator with 350 to 700 cm² actuator area, for integral positioner attachment (see Data Sheet ▶ T 8310-1)

¹⁾ Accessories required. See associated actuator documentation

Fig. 1: Type 3253-1 Pneumatic Control Valve with Type 3271 Actuator

Further versions

- **Insulating section or bellows seal** · See Technical data
- **Additional handwheel** · See Data Sheets ▶ T 8310-1, ▶ T 8310-2 and ▶ T 8310-3
- **DIN version** · DN 15 to 500, PN 10 to 400 · See Data Sheet ▶ T 8055
- **Type 3244** · NPS ½ to 6, Class 150 to 300 · See Data Sheet ▶ T 8026
- **Type 3253-2 Electric Control Valve** · Details on request
- **Type 3253-3 Manually Operated Valve** with Type 3273 Hand-operated Actuator · See Data Sheet ▶ T 8312

Principle of operation

Depending on the plug arrangement, the three-way valve can be used either as a mixing or diverting valve.

In mixing valves, the process media to be mixed enter at valve ports A and B. The combined flow exits the valve at port AB (Fig. 2 and Fig. 3). The flow rate from ports A or B to AB depends on the cross-sectional area of flow between the seats and plugs.

In diverting valves, the process medium enters at the valve port AB and the partial flows exit at ports A and B (Fig. 4).

Fail-safe position

Depending on how the springs are arranged in the pneumatic actuator (see Data Sheets ▶ T 8310-1, ▶ T 8310-2 and ▶ T 8310-3), the valve has two different fail-safe positions effective upon air supply failure.

- **Actuator stem extends:** when the supply air fails, port B is closed in mixing valves and port A is closed in diverting valves.
- **Actuator stem retracts:** when the supply air fails, port A is closed in mixing valves and port B is closed in diverting valves.

Fig. 2 to Fig. 4 show configuration examples.

Fig. 2: Type 3253-1 Control Valve with Type 3271 Pneumatic Actuator and additional handwheel, body version for NPS 2 to 20, plug arrangement for mixing service (anti-rotation fixture for NPS 2 and higher)

Fig. 3: Type 3253 Three-way Valve, body version for NPS 1/2 to 1 1/2, plug arrangement for mixing service
plug arrangement for diverting service NPS 1/2 to 1

Fig. 4: Type 3253-7 Control Valve with Type 3277 Pneumatic Actuator (only up to NPS 2), body version for NPS 1 1/2 to 20, plug arrangement for diverting service (anti-rotation fixture for NPS 2 and higher)

Notes on the differential pressure tables

- Bench ranges highlighted in gray apply to standard operation ($p_2 = 0$), i.e. at rated travel · Bench ranges not highlighted apply to the maximum pretensioned springs
- Bench ranges not highlighted apply to the maximum pretensioned springs.
- Differential pressures in parentheses refer to the values for half travel in parentheses in the bench range row
- The springs in actuators with fail-safe action "actuator stem retracts" cannot be preloaded.

Dimensional drawings

Type 3271 Pneumatic Actuator

Type 3253-1

Type 3277 Pneumatic Actuator

Type 3253-7

Type 3253 with bellows seal or insulating section

Selection and sizing of the control valve

- Calculate the C_V (K_V) coefficient according to IEC 60534-6.
- Select valve size NPS and C_V (K_{VS}) coefficient from Table 3, Table 4, and Table 5.
- Determine the permissible differential pressure Δp from Table 4 and Table 5.
- Select the valve body material from Table 1 and Table 2 as well as from the pressure-temperature diagrams in Information Sheet ► T 8000-2
- Select accessories from Table 1 and Table 2.

Order specifications:

Valve size	NPS
Pressure rating	Class
Body material	According to Table 2
Bonnet	Standard bonnet, insulating section or bellows seal
Type of connection	Flanges
Actuator	Type 3271 or Type 3277 (see Data Sheets ► T 8310-1, ► T 8310-2 and ► T 8310-3)
Fail-safe position	Actuator stem extends/retracts
Process medium	Density in lb/cu.ft or kg/m ³ and temperature in °F (°C)
Flow rate	lb/h or kg/h cu.ft/min or m ³ /h
Pressure	p_1 and p_2 in psi (bar) (absolute pressure p_{abs}) (with minimum, normal and maximum flow rate)
RFID tag	Yes/No
Valve accessories	Positioner and/or limit switch

Note: The temperature limits for DIN and ANSI versions are not directly converted temperatures.
