

T 8310-1/4/5/6 EN

Pneumatic actuators up to 750v2 cm² ¹⁾

Type 3271 · Type 3277 for integral positioner attachment

Application

Linear actuators particularly suitable for attachment to Series 240, 250, 280 and 290 Valves as well as Type 3510 Micro-flow Valves

Actuator area	120 to 750v2 cm²
Rated travel	7.5 to 30 mm

The Type 3271 and Type 3277 Pneumatic Actuators contain a rolling diaphragm and internal springs and have the following special features:

- Low overall height
- Powerful thrust at high stroking speed
- Low friction
- Various bench ranges by varying the number of springs or their compression
- No special tools required to change the bench range or reverse the direction of action (also version with handwheel)
- Permissible operating temperatures from -60 to +120 °C
- Direct attachment of accessories on additional yoke for Type 3277 with concealed travel pick-off (Fig. 2 and Fig. 5)

Versions

- **Type 3271 with clamped-in diaphragm · 240, 350 or 700 cm²** actuator areas (Fig. 1), optional stainless steel (1.4301) version
- **Type 3277 with clamped-in diaphragm · 240, 350 or 700 cm²** actuator areas for direct attachment of accessories, optional stainless steel (1.4301) version
- **Type 3271 with full diaphragm · 175v2, 350v2, 355v2 or 750v2 cm²** actuator areas (Fig. 1), optional stainless steel (1.4301) version (not for 355v2 cm²)
- **Type 3277 with full diaphragm · 175v2, 350v2, 355v2 or 750v2 cm²** actuator areas for direct attachment of accessories (Fig. 2), optional stainless steel (1.4301) version (not for 355v2 cm²)
- **Type 3271-5 · 120 cm²** actuator area, die-cast aluminum housing (Fig. 4), optionally with additional handwheel (Fig. 12)
- **Type 3277-5 · 120 cm²** actuator area, die-cast aluminum housing for direct attachment of accessories (Fig. 8), optionally with additional handwheel (Fig. 5)
- **Type 3271 or Type 3277 · Additional handwheel** for actuators with 175v2 to 750v2 cm² actuator areas (Fig. 6 and Fig. 11)

- **Type 3271 · Travel stop** (Fig. 13), minimum and maximum travel mechanically adjustable in versions with 175v2 to 750v2 cm²

¹⁾ v2 is added to the actuator area (e.g. 175v2 cm²) to indicate actuators with a full diaphragm

Further versions

- **Type 3273 Side-mounted Handwheel** ▶ T 8312
- **Type 3271 or Type 3277 · Combined version with handwheel and travel stops on both sides** (Fig. 14) for 175v2 to 750v2 cm² actuator areas (not for 240 cm²)
- Versions for other control media (e.g. water) available on request

Principle of operation

The signal pressure p_{st} creates the force $F = p_{st} \cdot A$ at the diaphragm surface A which is opposed by the springs (10) in the actuator. The bench range is determined by the number of springs used and their compression, taking into account the rated travel. The travel H is proportional to the signal pressure p_{st} . The direction of action of the actuator stem (7) depends on how the springs are installed in the actuator and the location of the signal pressure connection (S).

Actuators with 175v2, 350v2, 355v2 and 750v2 cm² actuator areas are designed with a full rolling diaphragm (see Fig. 10). The diaphragm of actuators with 240, 350 and 700 cm² actuator areas is clamped-in (see Fig. 9).

The stem connector (26) connects the actuator stem (7) with the plug stem of the valve.

The adjustable **mechanical travel stop** (Fig. 13) is suitable for actuators with actuator areas of 120, 175v2, 240, 350v2, 355, 700 or 750v2 cm². Using the travel stop, the actuator travel can be limited by up to 50 % in both directions (actuator stem extends or retracts) and permanently adjusted.

Direction of action

Actuators are available with the following directions of action:

- **Actuator stem extends (FA):** the springs cause the actuator stem to move to the lower end position (sectional drawings, right) when the diaphragm is relieved of pressure or when the supply air fails.
- **Actuator stem retracts (FE):** the springs cause the actuator stem to retract (sectional drawings, left) when the diaphragm is relieved of pressure or when the supply air fails.

4) In versions in which the lifting eyelet is welded directly onto the housing, H' and H are identical. The value H' applies.

Throttling or on/off service

The pneumatic actuators are designed for a maximum supply pressure of 6 bar when used for throttling service.

In on/off service, the supply pressure must be limited.

For the direction of action "actuator stem retracts (FE)", the permissible supply pressure must not exceed the upper bench range value by more than 3 bar:

Signal pressure range	Fail-safe action	Max. supply pressure
0.2 to 1.0 bar	Actuator stem retracts	4 bar
0.4 to 2.0 bar		5 bar
0.6 to 3.0 bar		6 bar

With "stem extends" direction of action and travel stop, the supply pressure must not exceed the upper bench range value by more than 1.5 bar.

Accessories

The pneumatic actuators with 750v2 cm² actuator area have a female thread on the top diaphragm case to allow an eyebolt or swivel hoist to be screwed into it. The eyebolt can be used to vertically lift the actuator and is included in the scope of delivery. The swivel hoist is designed for setting a control valve assembly upright or for lifting the actuator without valve. The swivel hoist can be ordered (accessories).

Actuator area	Item no.	
	Ring bolt (DIN 580)	Swivel hoist
750v2 cm ²	8325-0131	8442-1017

Actuators with 355v2 cm² actuator area or smaller do not require a female thread or welded-on lifting eyelet due to their light weight. Actuators with 700 cm² actuator area have a welded-on lifting eyelet.

Ordering text

Actuator	Type 3271 Type 3277 for direct attachment of accessories
Actuator area	... cm ²
Travel	... mm
Optional	Manual adjuster Travel stop Combined version with handwheel and travel stops on both sides
Signal pressure range	... bar
Direction of action	Actuator stem extends (FA) Actuator stem retracts (FE)
Signal pressure connection	G .../... NPT
Rolling diaphragm	NBR/EPDM/PVMQ (175v2, 350v2, 355v2 and 750v2 cm ² only)
